

SCULPT NOUVEAU Patinas and Metal Finishes

Universal Patinas

The Universal Patinas are available in numerous unique colors allowing for an unlimited variety of finishes. These patinas may be used on all metals and the Metal Coatings. They may be blended with each other or with any other patina. Universal Patinas are non-reactive, UV safe, and do not contain acids.

Dye-Oxide Patinas

Dye-Oxide Patinas are a cross between the Solvent Base Dyes and a patina. All of the colors are transparent and may be blended or layered together to produce any color. Like the Universal Patinas, Dye-Oxide Patinas are UV safe, non-reactive, and do not contain acids.

Solvent Dyes

The Solvent Dyes are an extremely versatile finishing tool. They are commonly used to apply color to a difficult material (glass, resin, etc.), change the existing color of a finish, or repair a damaged finish. In addition, the Solvent Dyes may be added to lacquer, wax, epoxy, oils, resin, or any other solvent product. They may be blended to create different shades and diluted using the Dye Thinner. All of the colors are transparent except white.

Metal Wax

The finest quality waxes for metal have been blended to make a special formula designed specifically for metals and patina finishes. Containing UV inhibitors and hardeners, this wax is incredibly durable and long lasting. Each color of wax is made in two formulas: one for bronze, brass, copper, and aluminum and another for iron and steel.
